

Omnibus CPC structure is weak — above null, below the locked bar

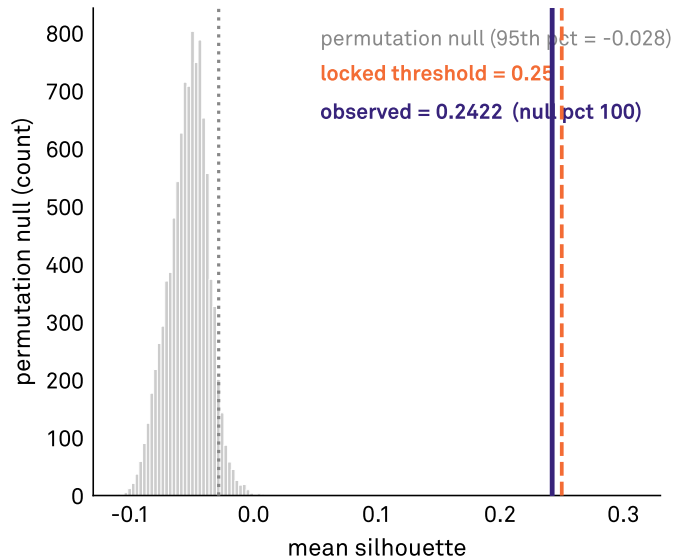

Ward/Euclidean clustering of the 6-dim per-model CPC signal; gap selects $k=3$.

Silhouette 0.2422 exceeds the 95th-percentile null but falls under the 0.25 autonomy threshold — a near miss.

Gap statistic (omnibus, 112 → 55 defined)

Observed silhouette vs 0.25 threshold & null

Autonomy NOT SUPPORTED — silhouette below locked 0.25 threshold (though above the permutation null).
