

The saturation bit at the recall floor, not the ϕ ceiling

Recognition $\times$ recall for the 72 trio brands; the pre-registration expected a ceiling exclusion.

Fork-A counts & IL-means: v37_verdicts.json. Recognition axis (C_P): osf/methodology/v1_7/data/v1_7_cpc.csv (dual-source).

Attrition floor-driven: 19 true-zeros excluded, 0 at ceiling; the excluded are recognized-but-unrecalled.
